

ULTRASOUND OF THE THYROID:

Real-time sonography of the thyroid gland was performed utilizing a small parts transducer.

The thyroid gland is normal in size and configuration.

The right lobe measures _____ cm sagittally, x _____ cm transversely, x _____ cm in AP dimension.

The left lobe measures _____ cm sagittally, x _____ cm transversely, x _____ cm in AP dimension.

The isthmus measures _____ cm.

Homogeneous echoes are seen in both lobes.

No focal solid or cystic nodules are identified.

Vascular structures and trachea are unremarkable.

Overlying strap muscles are unremarkable.

IMPRESSION: Normal thyroid ultrasound.

Clinical data:
